

As 'a professional in industrial networking and video transmission', HYTEC INTER devotes itself to solutions which ensure customer satisfaction whilst striving to contribute to the development of both society and our employees.

HYTEC INTER was founded in 1998 to provide dedicated technical support to specific DSL service providers.

From 2003, it shifted its focus drastically towards importing legacy telecommunication devices, such as analog leased line modems and xDSL modems, as most major system integrators in Japan ceased their production. Soon after HYTEC increased the technical training of its engineers in order to provide high level support to clients in Japan. Through this dedication HYTEC established strong relationships with legacy copper infrastructure dependant clients in vertical sectors such as transportation, local government, power utilities and steel plants. In 2007, HYTEC started the production of its own brand the ABILINX series. Furthermore it expanded its business into the security market adding industrial Ethernet and PoE products to its lineup.

Nowadays HYTEC has expanded its product portfolio further to include outdoor wireless communication and mobile video transmission devices, in order to offer a suitable total solution for each customer.

It is HYTEC's mission to continue contributing to the development of society, through offering high quality products and solutions to satisfy our customer's needs.

Business Cycle

Our job starts from discovering latent demands in the market.

Once we have defined the needs, we work with our domestic and overseas partners to find and/or create the most suitable device. It is crucial that we evaluate each device thoroughly in order to ensure its qualification for the strict quality standards of Japan.

After the product is finalized, we make sure that each unit is tested at the point of receipt from our supplier.

Upon proposal, our sales team works with the clients to analyze their application and budget in order to select the best suited device for them.

We also provide a two-week free trial period to ensure the functionality and quality of the desired device.

We have our own technical support team that provides dedicated assistance before and after deployment.

Interacting with clients throughout the cycle leads us to discover an opportunity for a new project.

Management Values

HYTEC INTER strives to become...

- A company that devotes itself into ensuring customer satisfaction at its highest level.
- A company that designs the best suited products for its clients' projects.
- A company that proactively challenges difficult businesses that other companies are reluctant to take on.
- A company that creates opportunities in markets where other companies choose to not dedicate themselves to.
